Addendum #1

RFP for Walk-Thru Metal Detectors for Pratt & Whitney Stadium at Rentschler Field

This addendum dated January 6, 2025 forms a part of the Contract Documents and modifies the original RFP. Please include this addendum in your RFP submission.

- 1. The RFP mentions that the walk-thru metal detectors must be able to withstand the high wind situations experienced by the stadium. What are the maximum and average wind speeds encountered at the stadium?**

The maximum wind speeds during events can be as high as 30-35 mph and average about 8-10 mph.

- 2. Is there power at the locations of the walk-thru units?**

There is power, but not in a close enough location to run multiple units off of it. We prefer that the units can run off of battery but have the capabilities to run a few at each gate off of power.

- 3. Do you have a drawing of the location and setup of the units?**

See attached

- 4. How many metal detectors do you currently use?**

We deploy anywhere from 30-40 units per event depending on scale and expected attendance of each event.
